

```
#include <iostream>
using namespace std;

int main() {
    string s;
    cout << "Enter a string: ";
    cin >> s;

    int count = 1;

    for (int i = 0; i < s.length(); i++) {

        if (isdigit(s[i])) {
            cout << s[i];
            continue;
        }

        while (i + 1 < s.length() && s[i] == s[i + 1]) {
            count++;
            i++;
        }

        if (count == 1)
            cout << s[i];
        else
            cout << count << s[i];

        count = 1;
    }

    return 0;
}
```
